## Design Problem: Building the Beta

Click to open Instructions in another window. This will allow you to have the instructions open and enter your design at the same time.

## Check & Save

Elena Glassman, a researcher here at MIT, has developed a tool that lets you find and/or create hints when a particular tests fails during the design tests for a module. The error report will include a button that you can click to visit the 6.004x page on [www.classoverflow.org](http://www.classoverflow.org) where previously-submitted hints are organized by lab, module, and test number:

This type of peer-to-peer interaction can be a great resource if we all contribute. If you have comments or suggestions about this tool, please use the Feedback button on the courseoverflow website or send email to [classoverflow@mit.edu](mailto:classoverflow@mit.edu).

The Z logic is being tested and the test is for all bits in the register, not just bit 0.

Thanks Bill, I read other posts dealing with this but I guess I still wasn't handling z properly. I was able to figure it out now and I have a working beta!!!
